

18. Write a program to demonstrate multilevel inheritance.**Code:**

```
#include <iostream>
using namespace std;

class Animal {
public:
    void eat() {
        cout << "Animal is eating." << endl;
    }
};

// Derived class 1 (inherits from Animal)
class Mammal : public Animal {
public:
    void walk() {
        cout << "Mammal is walking." << endl;
    }
};

// Derived class 2 (inherits from Mammal, which in turn inherits from Animal)
class Dog : public Mammal {
public:
    void bark() {
        cout << "Dog is barking." << endl;
    }
};

int main() {
    Dog dog;

    dog.eat(); // Inherited from Animal
    dog.walk(); // Inherited from Mammal
    dog.bark(); // Specific to Dog

    return 0;
}
```

OUTPUT:

```
Animal is eating.
Mammal is walking.
Dog is barking.
```
